BRITISH COLUMBIA – YOUR TRUSTED & RELIABLE PARTNER IN CYBERSECURITY

– NATURALLY

Safeguarding all types of data and digital infrastructure against theft and loss is crucial across all industries. With new regulations and legislation emerging, cybersecurity is transitioning from an optional preference to a mandatory requirement.

As the digital revolution rapidly advances, there is growing global demand to ensure security is keeping pace to unlock the full potential of digitization, combat fraud and improve efficiencies. Leading edge technologies are moving from radical scientific breakthrough into real world implementation. The security of these new technologies, including protection of private information, must also be strengthened and adopted alongside to build and maintain people's confidence.

British Columbia (B.C.) is home to companies pioneering cutting-edge security, identity, risk and compliance solutions. This also includes a variety of service providers from incident response (IR) firms to digital forensic (DF) firms, risk management firms, information technology (IT) firms and boutique consultancies ready for virtual Chief Information Security Officer (vCISO) engagements globally.

This directory provides a glimpse into B.C.'s diverse and thriving cybersecurity ecosystem to showcase the innovation and capabilities of dynamic B.C.-based companies. The directory features a diverse range of security products and service offerings across the entire incidence response cycle for a wide variety of customers from enterprises and military to small businesses.

The National Institute of Standards and Technology (NIST) Incident Response Process

British Columbia — World-Class Security Solutions

British Columbia's competitive advantage can be attributed to the world-class talent of security leaders and experts that call B.C. home, as well as the devoted and driven companies dedicated to solving problems and addressing business risks.

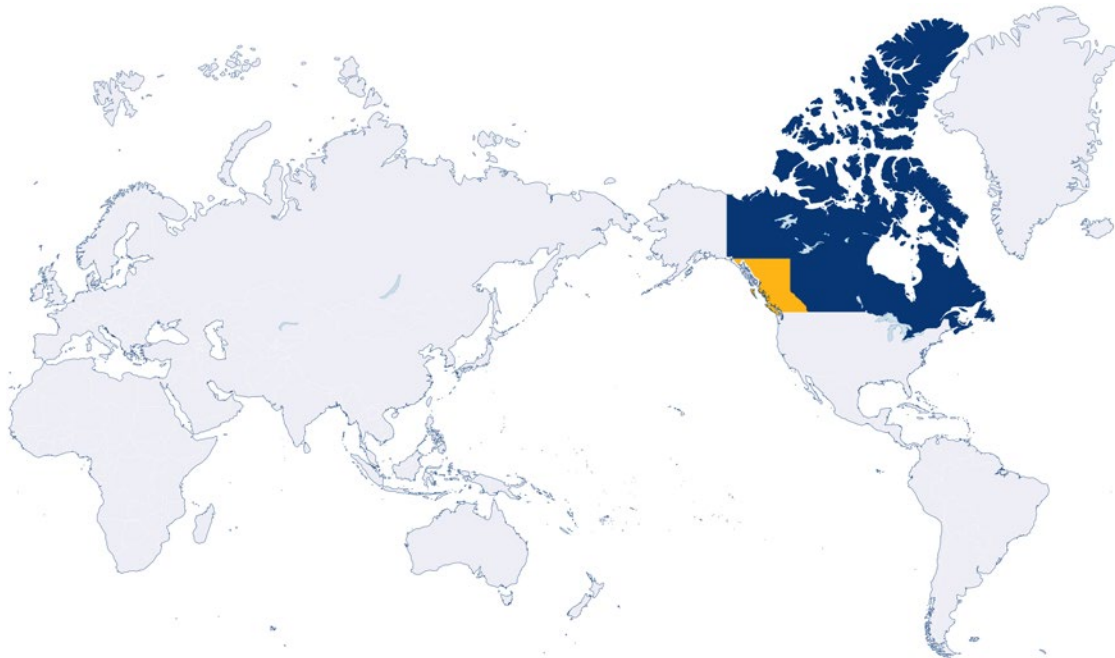

Remarkable B.C. companies are bringing forward their frontier technologies, cutting-edge innovation and first-class service in the cybersecurity sector. They stand ready to bring you solutions and to partner with you.

A Flourishing Innovation Ecosystem

North of Silicon Valley and Seattle, British Columbia has a uniquely creative and collaborative tech culture. B.C. has quickly grown into a thriving innovation hotspot, with more than 11,000 tech companies, and is the birthplace of the one-way quantum computer and home to the Quantum Algorithms Institute. Tech giants such as Amazon, Salesforce, Samsung and Microsoft have a large presence in B.C., while leading international cybersecurity players including Fortinet, Splunk, IBM and the Mastercard's Global Intelligence and Cyber Center of Excellence also anchor B.C. as a global centre for cyber security innovation.

A Prime Location

As Canada's gateway to the Pacific, British Columbia's business day conveniently overlaps with morning work schedules in Asia, afternoon working hours in Europe, and perfectly synchronizes with the full working days of California and Washington State.

COMPANY SOLUTION

aDolus Technology Inc. is a global authority on software supply chain intelligence for critical infrastructure.

It operates FACT, a robust platform for correlating information from many sources about IT, Internet of Things (IoT) and OT software supply chains. This solution provides unprecedented visibility to prevent the installation of unsafe third-party software in critical systems and monitor it throughout its operating life span.

ADVANTAGES AND USE CASES

FACT operates at scale, is vendor and operating system-agnostic, and has an industry-leading database of millions of OT, IT and IoT files. FACT is available with hybrid on-prem and SaaS options.

aDolus won the New Ventures B.C. Award in 2020, Global InfoSec's Most Innovative Software Supply Chain Security Award in 2022 and its Founder, Eric Byres, was inducted into Industrial Cyber's Hall of Fame in 2023.

aDolus has engaged with several major original equipment manufacturers (OEMs) and systems integrators to help secure their software supply chains and manage vulnerabilities. aDolus was instrumental in helping a major oil and gas vendor respond to the Log4j debacle. Most recently, aDolus announced a strategic partnership with another technology platform to provide deep visibility and strong cyber defense for critical industries, including foreign government agencies and regulated customers.

YEAR ESTABLISHED

2017

PRODUCTS AND SERVICES

- The aDolus FACT platform offers binary composition analysis on OT, IT and IoT software; software validation and scoring; SBOM generation; malware detection; certificate validation; and software supplier discovery
- The aDolus Services team offers extended file format support, custom executive and audit reporting and SME advisory services

TARGET INDUSTRIES/SECTORS

- Oil and Gas
- Manufacturing
- Medical
- Utilities
- Aerospace
- Automotive
- Data Centers
- DevOps
- Corporate IT

MARKET ENTRY DETAILS

- Direct company sales
- Strategic partnerships
- Licensing individual capabilities of the FACT platform

Akimbo Technologies Inc.

North Vancouver, British Columbia
www.akimbotechnologies.com

COMPANY SOLUTION

Akimbo offers patented cybersecurity solutions (DEFENSA) that detect, correct and heal man-in-the-middle cyberattacks in real-time, without reliance on a cloud connection, without utilizing artificial intelligence or machine learning and without suffering false positives or negatives. Addressable markets include military and commercial vessels, ports and control systems for command centers and critical infrastructure to ensure service continuity.

DEFENSA currently works on OT networks such as CAN and NM2K and Ethernet is in development. DEFENSA works with both encrypted and unencrypted data and is managed via the company's administration console (OAM) for installation, management and administrative functions.

ADVANTAGES AND USE CASES

Akimbo is redefining the traditional definition of cybersecurity by delivering real-time cyberattack correction to combat persistent cyber threats. DEFENSA's patented proactive and adaptive approach heals cyber threats in real time to prevent service disruption and data compromise. This approach obviates the need for network recovery as cyberattacks are promptly neutralized.

Akimbo's milestones to date include: (2019) Canadian government project, (2021/2022) Canadian military projects, (2023) Top 40 NATO DIANA program, (2023) accepted to Creative Destruction Labs Ocean cohort, (2024) awarded Canadian government project and (2024) 100 out of 100 Royal CDN Navy project assessment. One patent awarded, seven pending.

DEFENSA is ideal for two scenarios. First, a hw/sw option for vessels and control systems already in use. Second, a sw-only offer for these systems currently in development.

YEAR ESTABLISHED

2016

PRODUCTS AND SERVICES

- DEFENSA cybersecurity solutions heal man-in-the-middle cyberattacks in real-time without reliance on a cloud connection, without utilizing either artificial intelligence or machine learning and without suffering false positives or negatives. Two deployment options are available.

TARGET INDUSTRIES/SECTORS

- International defense primes/subprimes
- Critical system and OT network system integrators
- Port authorities/operators
- Navy innovation programs
- Commercial marine operators
- Autonomous/manned machinery manufacturers

- Denmark
- Sweden
- Norway
- Holland
- France
- New Zealand

COMPANY SOLUTION

Carmel's information risk and cybersecurity practice is centered around taking the skills and judgment of seasoned information security officers who have worked in larger publicly listed companies and making them available to small-medium companies. Today's threats do not discriminate. Any company of any size is subject to scrutiny by unauthorized parties from anywhere on the Internet.

Despite their size, smaller organizations nonetheless need an information security officer role, either on-demand or on a part-time basis. Given the constant onslaught of attacks from cyber actors of all types from the Internet, today's reality dictates that only companies that have a robust cybersecurity program will have a chance at building cybersecurity resilience.

ADVANTAGES AND USE CASES

Carmel Info-Risk is one of the oldest vCISO practices in British Columbia. Its senior cybersecurity professionals are credentialed as CISM or CISSPs and are seasoned ex-CISOs or ex-cybersecurity directors. Its executive CISO consultants have diverse professional backgrounds such as engineering, business, auditing and accounting or information technology.

Founder Edward Pereira has assembled a team of seasoned cybersecurity consultants, ranging 10-20 years in the industry. As an example, Edward is an Information Systems Audit and Control Association (ISACA) Vancouver Past President and 12-year veteran of the board. He is a founding member of the B.C. Government's Provincial Security Advisory Council. In 2022, as a Chartered Professional Accountant, Edward was awarded the Distinguished Service Award for Volunteerism for his contributions to building up the cybersecurity community in British Columbia. Edward co-founded several ISACA Vancouver events including B.C. AWARE CAMPAIGN, ISACA Vancouver Industry Sector Days, ISACA Vancouver Executive Series Night and B.C. Cybersecurity Excellence Awards. Edward is also a member of the Chief Information Officer Association of Canada (CIOCAN) and the Cyber Risk Alliance (U.S.).

COMPANY SOLUTION

Certn, a global leader in background screening, is now a trailblazer in the field of identity verification. The company's advanced platform is a cornerstone for businesses seeking to establish trust and security with their users, effectively neutralizing the threat of sophisticated fraud.

Leveraging advanced AI and biometric technologies, Certn delivers immediate identity verification through the simple use of a government-issued ID and a self-portrait photograph. This method not only streamlines the user experience but also adheres to the strictest security protocols.

Certn's platform boasts remarkable adaptability, accommodating over 13,500 government-issued ID types across more than 140 languages and incorporating advanced functionalities such as liveness detection and facial biometrics.

ADVANTAGES AND USE CASES

- **Seamless User Experience with Robust Security:** By innovatively applying AI and biometrics, Certn offers a verification process that is both swift and secure, allowing customer onboarding in under 30 seconds.
- **Comprehensive, All-in-One Solution:** Certn's platform integrates various aspects of the customer onboarding process, such as remote identity verification, face liveness detection, biometric identification, ID fraud detection and age verification. This consolidated approach allows businesses to provide a smooth, uninterrupted user experience while maintaining robust security and compliance measures.
- **Intelligent Fraud Detection:** Certn's innovative use of artificial intelligence and biometric technology enables the platform to detect and prevent emerging identity fraud attacks more effectively.

COMPANY SOLUTION

CyberClan services are centered around providing end-to-end enterprise cyber security with a human response, human monitoring and human management focus. This includes industry leading breach response, comprehensive risk assessment and education, and 24/7/365 managed detection and response services, under one virtual roof. As a global leader in both reactive and proactive cybersecurity, CyberClan's unique approach combines industry-leading technology with an expert team who monitor systems around the clock, allowing CyberClan to transcend the limitations of other cybersecurity services providers to deliver a safe and cost-effective experience.

ADVANTAGES AND USE CASES

CyberClan is unique in that it can offer a holistic 360 experience for clients. Offering a state-of-the-art virtual security operations centre (SOC) and around-the-clock human monitoring and threat detection to keep clients' enterprise safe, all while remaining technology agnostic. With a 15-minute response time globally, CyberClan surpasses many organizations in the market. CyberClan has a 99% success rate on ransomware negotiations and manages over 50,000 endpoints globally. Additionally, CyberClan is Systems and Organizations Controls (SOC) II compliant and actively working towards National Cyber Security Centre (NCSC) accreditation.

D3 Security

Vancouver, British Columbia
www.d3security.com

COMPANY SOLUTION

D3 Security is a leading provider of security orchestration, automation and response (SOAR) software, with its Smart SOAR platform. Today's organizations face an entrenched set of problems when trying to secure their data and systems. These include an overwhelming volume of security alerts, an ever-growing stack of siloed security tools and a lack of skilled cybersecurity professionals. Smart SOAR helps solve all these problems by integrating a company's entire security stack (SIEM, endpoint protection, firewall, email protection and other tools) onto a single security operations hub, from which users can trigger automated playbooks that act at machine speeds across the environment to identify and mitigate threats.

ADVANTAGES AND USE CASES

D3 Security is a rare, independent, SOAR vendor, which can integrate equally well with any set of tools that its customers prefer. The quality of D3 Security's integrations and playbooks are also a key differentiator.

Smart SOAR's Event Pipeline is another important innovation. It uniquely enables Smart SOAR to automate at the level of incoming security alerts, normalizing, deduplicating, triaging and enriching alerts before they are seen by a human analyst.

D3 Security has been recognized by industry analysts such as Gartner and KuppingerCole. The company works closely with the Microsoft Intelligent Security Association (MISA) and has been a finalist for multiple MISA Awards. D3 Security was recently selected to be a participant in the Microsoft Copilot for Security Partner Private Preview. D3 Security has been providing security technology to many of the world's most sophisticated security teams for more than 20 years.

Eureka DevSecOps

Vancouver, British Columbia
www.eurekadevsecops.com

COMPANY SOLUTION

Eureka is carving out a new frontier in the development, security and operations (DevSecOps) market with a unique proposition: a developer-friendly platform that significantly boosts efficiency and software security risk management. Its early-stage startup offers a compelling blend of free core tools, a marketplace, and advanced, monetizable features like AI-enhanced threat and risk management.

Eureka is not just participating in the cybersecurity arena, but poised to redefine it with its developer-driven approach. This positions Eureka uniquely for rapid growth and scalability in a market hungry for innovative and time-saving solutions.

ADVANTAGES AND USE CASES

Eureka offers a comprehensive and integrated solution with end-to-end security testing capabilities. Eureka combines threat scenarios from multiple scanners, which would otherwise be run independently from each other. Eureka will catch separate low-severity issues that can combine into more severe threat scenarios. This is what makes Eureka different. The solution also lets clients store their data in their own cloud environment and protect it using keys they own and manage.

Eureka has developed and launched Eureka DevSecOps. It has entered the market and is gaining traction, onboarding many clients. To date, operations have been supported by up to \$1 million on non-diluted funds.

YEAR ESTABLISHED

2024

PRODUCTS AND SERVICES

- Eureka DevSecOps Platform (various tiers of licensing available)
- Eureka DevSecOps Service (various options available)

TARGET INDUSTRIES/SECTORS

- Medium-sized enterprises in the finance, e-commerce or health sectors, with \$10 to \$250 million in annual revenue and have between 50 to 1,000 employees

MARKET ENTRY DETAILS

- Direct to customer sales from Microsoft Azure Marketplace

TARGET MARKETS

- Jamaica
- Cayman Islands

COMPANY SOLUTION

Forward's highly accomplished team delivers application and cloud security solutions, focusing on midsized organizations in finance, e-commerce and health. It implements Eureka DevSecOps offerings that help teams build and operate software securely in the cloud and helps with achieving DevSecOps transformation goals.

ADVANTAGES AND USE CASES

Having prior experience building software and infrastructure, Forward's team has a fundamental understanding of IT systems allowing them to take a more in-depth approach when delivering security solutions. In addition, clients benefit from Forward's collective experience with global organizations, providing them with a broader view of challenges and solutions, as well as best-in-class practices.

- Team members with prior software and infrastructure development experience.
- Use of repeatable and standardized processes aligned with industry standards such as the Open Web Application Security Project (OWASP) Application Security Verification Standard (ASVS).
- Use of risk-based approach when identifying and reporting issues to allow clients to focus where it matters most.
- Experience with global organizations, providing a broader view of challenges and solutions, as well as best in-class practices.

Forward Security Inc. is a winner for Clutch's 2023 Cybersecurity and Penetration Testing Awards, accepted into the Microsoft for Startups Founders Hub in 2023 and announced as #2023TIA Finalists in the Growth category. They won Most Promising Canada Tech Services Company 2022 and awarded the Canadian Workplace Culture Certification in 2022.

COMPANY SOLUTION

GeoComply provides anti-fraud and cybersecurity solutions that prevent and detect fraud and help verify a user's true digital identity. Trusted by leading brands and regulators for over 10 years, the company's geolocation solutions are installed on over 400 million devices and analyze over 12 billion transactions every year.

Specializing in compliance-grade geolocation technology, GeoComply offers AML, compliance and fraud solutions for the banking, cryptocurrency, payments, iGaming and media and entertainment industries, building an impressive list of customers, including Akamai, Amazon Prime Video, BBC, Nextdoor, Luno, DraftKings, FanDuel, BetMGM and over a 100 more companies globally.

ADVANTAGES AND USE CASES

By detecting the location of a user at the time of every regulated gaming transaction, Geocomply's technology provides dynamic data points that not only help to accurately verify an individual's identity at the time of account creation but are also able to uncover patterns of illicit online activity. This technology has proven invaluable in the safeguarding of various sectors, giving operators of online gaming businesses rich data to prevent account takeovers, account sharing, proliferation of payment fraud, and identity theft; defend against fraudulent chargebacks; and prevent unauthorized access from sanctioned jurisdictions.

GeoComply has been acknowledged through an array of awards, including Employer of the Year, Company of the Year, Entrepreneur of the Year, BC Top Employer, and Canadian Top Employer, demonstrating a commitment to excellence and innovation in cybersecurity and establishing them as an anchor within the Vancouver technology community.

COMPANY SOLUTION

Regardless of how attack techniques and tactics change, all attacks still rely on Internet infrastructure, used by the bad actors to command, control and direct their attacks. HYAS focuses on being a leading authority on identifying, tracking and detecting this infrastructure. The HYAS Adversary Infrastructure Platform is an authority on attacker infrastructure, with a complete understanding of not just what has happened and what is happening now, but what will happen in the future. HYAS solutions for proactive threat intelligence, used by analysts, researchers and SOC teams, as well as the HYAS solutions for overall organizational cyber and business resiliency, utilize the platform for unique intelligence, capabilities and overall effectiveness that is unparalleled in the industry.

ADVANTAGES AND USE CASES

HYAS' award-winning threat intelligence and investigation platform and protective Domain Name Systems (DNS) solutions are trusted worldwide by international law enforcement agencies, United States Department of Homeland Security, three letter agencies, Fortune Five and Fortune 50 companies, global financial services entities, social media platforms and more.

HYAS has collected many prestigious industry awards for HYAS Insight, its threat intelligence and investigation platform and HYAS Protect protective DNS solution. Awards include CISOs Choice Awards, Global Infosec Awards, CyberTech 100 Award, Top Infosec Innovator Awards, Cybersecurity Breakthrough Awards, Fortress Cybersecurity Awards, Intellyx Digital Innovator Award, CyberSecured Awards and Globe Awards.

IDmelon Technologies Inc.

Vancouver, British Columbia
www.idmelon.com

COMPANY SOLUTION

IDmelon helps organizations to empower their existing identifiers such as identification badges (ID), smartphones and fingerprints as managed FIDO2 security keys (passkeys). With IDmelon, users get a phishing resistant, passwordless and usernameless experience while logging into their personal computers and web accounts using their ID badges or smartphones as security keys, rather than hardware keys. With IDmelon's solution, end users can enjoy a passwordless and usernameless login experience, which is the most secure way of logging in and also cut login times significantly to boost productivity and generate a high return on investment (ROI).

ADVANTAGES AND USE CASES

IDmelon helps organizations to empower their existing identifiers (smartphones, ID badges) as FIDO2 keys (passkeys). IDmelon also provides IT teams with a management panel to have full control and visibility over the authentication data of their organization. IT teams can manage onboarding, assign security keys, establish security key policies and more through this platform. In addition, IDmelon automates the deployment process, eliminating any difficult steps for end-users to start using their security key—all seamlessly handled in the background. This automation allows IDmelon to be deployed as quickly as overnight. IDmelon is capable of logging in users to web applications that FIDO does not support via a federation protocol over the IDmelon Single Sign-On (SSO) product.

IDmelon is a Microsoft Intelligent Security Association (MISA) member and is a trusted security key by the FIDO Alliance. IDmelon's clients provide consistent feedback that logging into machines and accounts is no longer a challenge, as users no longer forget their passwords or resort to reusing them, thereby eliminating security vulnerabilities.

COMPANY SOLUTION

INETCO is an enterprise software company that protects financial payment systems in real-time from fraud and advanced cyber-attacks. The INETCO platform has been deployed by the financial ecosystem globally to reduce fraud losses, increase profitability and protect clients. INETCO monitors all channels that a financial transaction can originate from and is the only solution with real-time visibility into the entire end-to-end journey of a financial transaction. This visibility enables INETCO to proactively identify and prevent fraudulent transactions and cybersecurity attacks before they cause damage.

ADVANTAGES AND USE CASES

INETCO protects payment systems from fraud and advanced cyber-attacks. Its solutions are designed specifically for the challenges faced by the payments industry such as real-time payment fraud, insider fraud, advanced persistent threats (APTs) and cybercrime. INETCO is the only solution with complete visibility into the entire end-to-end journey of payments for all financial protocols, which enables it to detect fraudulent activities that others cannot. INETCO's solution is protected by 28 patents with more pending. Use-cases include:

- A multinational bank lost \$19M in three hours and didn't know for days. After INETCO, the bank can now protect assets and payments infrastructure from fraud, cyberattacks and insider threats.
- U.S. state governments have deployed INETCO to prevent electronic benefits transfer (EBT) fraud from taking place against the most vulnerable in society. An estimated \$4.7 Billion USD in benefits is stolen annually across the U.S. and states are turning to INETCO to help address this massive problem.
- A payment processor for 11 national banks in Asia, handling hundreds of millions of transactions a day, chose to deploy INETCO to prevent advanced fraud related to transaction settlements.

COMPANY SOLUTION

ORIGIN is a platform that helps its clients seamlessly access and share disparate data sources. Clients can use ORIGIN to oversee sensitive and confidential information within their enterprise.

Intlabs will also help its clients achieve their data compliance, sovereignty, privacy and residency framework goals. Their product allows enterprises to share data with confidence.

ADVANTAGES AND USE CASES

ORIGIN advantages:

- Designed for user collaboration but with management tools for enterprise.
- Platform brings disparate data in a single user-centric interface.
- Uses a data mesh architecture that keeps source data safely in place.

In the complex data analysis and management landscape, businesses are often inundated with an array of tools and an ever-growing influx of data from diverse sources. The need for a comprehensive solution that simplifies data integration and ensures compliance and security is more pressing than ever.

ORIGIN is data sharing that gives organizations an essential edge.

COMPANY SOLUTION

Kobalt.io manages all aspects of cybersecurity programs for small and medium-sized, cloud-native businesses. The Kobalt team acts as an extension of its clients, considering unique limitations and needs, and providing support with services ranging from security program-as-a-service to privacy management and 24/7 monitoring.

ADVANTAGES AND USE CASES

Kobalt.io looks at the whole security program and dedicates a named security program lead backed up by a team of experts, combining personalized attention with depth and scale. Kobalt focuses on the high-tech sector and can move at an urgent pace. It brings a SOC team, training and a rich library of reusable assets so advice is paired with scalable process and implementations, at a fraction of the cost.

For clients with more advanced needs, Kobalt brings in rich capabilities like privacy/data protection officer (DPO) support and advanced threat/compliance monitoring. Kobalt goes beyond compliance checks. The team prioritizes delivering appropriately tailored, sustainable security programs aimed at reducing risk, with a specific focus on critical risks that are likely to impact the business.

Trusted by the National Research Council of Canada's Industrial Research Assistance Program (NRC-IRAP) to offer cybersecurity consultation to high tech businesses. Recognized on the 2021 ICT Ready to Rocket list. Trusted by a major Canadian bank as their Beyond Banking Partner in 2022. Proudly received Canada's Business Scale-up and Productivity Funding in 2022. Recognized among the 10 Top CEOs in Security Space in 2022. Recognized on Top 15 Cybersecurity Startups by Canadian Venture in 2023.

Kobalt.io has served over 500 businesses globally, spanning diverse industries and varying stages of security maturity — managing and developing cybersecurity programs for resource constrained organizations to maximize growth potential.

MergeBase

Vancouver, British Columbia
www.mergebase.com

COMPANY SOLUTION

MergeBase is a complete software supply chain security solution that combines software composition analysis (SCA), software bill of material (SBOM) and AI-powered attack surface reduction to help teams reduce vulnerabilities in their software and meet compliance requirements. MergeBase accelerates remediation with component upgrades and reduces the burden on development teams by automatically eliminating access to unused and vulnerable application components within the target software code.

ADVANTAGES AND USE CASES

MergeBase is the only software supply chain security platform offering a complete SBOM solution and full-spectrum DevSecOps support, providing coverage from development to production. While MergeBase supports the shift-left philosophy that has become common in application security, the unique, patented technology also enables AI-powered reduction of the application attack surface at run-time.

Security threats are not localized to specific industries, so the MergeBase solution has the full set of capabilities required to tailor a solution to each software supplier, regardless of industry. The MergeBase full-spectrum solution has been deployed in many different use cases, including a prominent financial services provider to protect systemically important payment applications at run-time in production. Further, MergeBase is also used by global medical device companies to provide SBOMs for their devices that demonstrate their robust approach to security. MergeBase is also relied upon by large international organizations that serve the U.S. Government, among others, who must adhere to rigorous standards of software supply chain security.

Mirai Security Inc.

Vancouver, British Columbia
www.miraisecurity.com

COMPANY SOLUTION

Mirai Security is a cybersecurity services company with a mission to turn cybersecurity into a business enabler for its clients. The company emphasizes a business-first approach, focused on people, processes and then technology. The full range of strategic and technical services are tailored to their client's strategic business goals and are designed to ensure they get the most value out of security budgets. From security strategy to penetration testing, Mirai Security does it all. The company always takes the time to listen and understand unique situations before proposing solutions that meet unique needs. Security teams are always being asked to do more with less. Mirai Security's solutions are designed to reduce manual effort and increase visibility into security programs. The company has helped hundreds of clients maximize the effectiveness of their security budgets and focus on the risks that really matter.

ADVANTAGES AND USE CASES

Mirai Security has licensed professional security engineers on staff, granting them the ability to certify the design of security-critical systems. Their human risk management practices develop security champions, transforming their client's staff into resilient human firewalls and significantly enhancing the effectiveness of primary lines of defense.

Mirai Security has achieved notable results in penetration testing and incident response. In a penetration testing (pen test) case study, Mirai Security testers successfully identified overlooked flaws of an international parking payment company. Further, the Mirai Security incident response efforts saved a regional retailer from bankruptcy by recovering data and systems that had been damaged in a cyber-attack. Mirai has been awarded Top 10 Cybersecurity Companies in Canada in 2022 by Cyber Security Review.

Plurilock Security Inc.

Vancouver, British Columbia
www.plurilock.com

COMPANY SOLUTION

Plurilock Security Inc. is a comprehensive cybersecurity solutions provider offering both proprietary cybersecurity software, an extensive list of critical and expert services, and a full line of cybersecurity solutions from industry leaders. Plurilock's software platform, Plurilock AI, provides single sign-on (SSO), passwordless multi-factor authentication (MFA), cloud access security brokerage (CASB), endpoint data loss prevention (DLP) and generative AI data loss prevention to organizations of all sizes and sophistication levels. Plurilock AI was rated #1 in the industry in customer satisfaction by Info-Tech in 2023. Plurilock's services offering, Plurilock Critical Services, is a world-class team of cyber experts that provides enterprises with end-to-end solutions for extremely urgent or intractable IT, cybersecurity or cloud systems problems, as well as a full line of traditional cybersecurity and IT services.

ADVANTAGES AND USE CASES

Plurilock can achieve cost savings and find under-budget cybersecurity solutions for organizations of all sizes. As a critical services provider, Plurilock can reduce project costs and mobilization period times, while delivering superior outcomes and expertise.

Plurilock holds multiple patents in the United States and Canada, employs multiple Ph.D. data scientists and boasts board members and advisors from across the federal government, defense and national security landscape. Plurilock has customers on multiple continents ranging in size from small businesses with dozens of employees to financial and technology firms with tens of thousands of employees that are critical to the global economy.

The company's proprietary Plurilock AI platform for SSO, MFA, CASB, DLP and AI safety was rated #1 in the industry in customer satisfaction in 2023 by Info-Tech.

Securicom Solutions

Vancouver, British Columbia
www.securicomnet.com

COMPANY SOLUTION

Securicom provides services to companies that have to monitor and control physical processes, machinery and infrastructure in various industries and who need to understand the importance of integrating IT and physical security strategies.

Securicom Solutions addresses security gaps in industrial and building management systems. It offers a comprehensive approach to protecting IoT and Operational Technology (OT) by standardizing and enhancing security measures. The company can assist clients in focusing on the protection of networks by bridging the gap between IT and physical security.

ADVANTAGES AND USE CASES

With a deep understanding of IT and physical security, Securicom's team offers tailored solutions for industrial and building management systems. Securicom Solutions provides holistic cybersecurity, ensuring comprehensive protection against cyber threats. Its service seamlessly integrates IT and physical security, ensuring effective management of all security aspects. Its solutions also mitigate cybersecurity risks, focusing on network protection and aligning IT and physical security efforts.

Proactively addressing security concerns enables clients to focus on their core activities and boosts productivity. These advantages position Securicom as a trusted partner, distinguishing the company in the IoT and OT cybersecurity market.

Securicom is a Fortinet Partner, CCNA and N-Able Partner.

COMPANY SOLUTION

StandardFusion is an enterprise-grade governance, risk and compliance (GRC) platform that helps organizations build trust across their operations by centralizing frameworks, streamlining workflows and removing redundancies.

The platform unifies risk, compliance, policy, vendor, audit and privacy management into one cohesive and automated system. This provides a holistic view across GRC activities, enabling enterprises to proactively mitigate risk by eliminating manual processes and reliance on cumbersome mega spreadsheets.

ADVANTAGES AND USE CASES

StandardFusion's GRC platform helps global organizations build trusted information security risk and compliance programs. The platform caters to a wide range of use cases from intermediate to high levels of maturity. Some key use cases include:

- Monitoring effectiveness of internal controls aligned with their risk and compliance objectives.
- Reporting and dashboards that enable comprehensive insights into enterprise risk and compliance programs.
- Simplified auditing workflows that automate evidence gathering.
- Facilitating cross team collaboration to simply stakeholder engagement and establish organizational-wide trust.
- Building trust throughout customer lifecycle with consistency, dependability, accountability, transparency, integrity and empathy.

StandardFusion customers note that the platform provides a high degree of flexibility and freedom, allowing users to make changes on the fly. Enterprise customers appreciate the industry leading application programming interface (API) that allows them to pull their own data directly into the tool. Customers appreciate the cost-effective transparent pricing model and the hands-on customer success focused onboarding.

COMPANY SOLUTION

Styx Intelligence is a unified digital risk platform that helps clients manage their external cyber, brand threats and third-party risk management. The platform achieves this by automated detection of brand impersonation by bad actors and remediation by performing takedowns, detection of attack surface vulnerabilities. This includes public facing IT assets, high value human targets (executives and VIPs) and third-party monitoring, providing timely remediation leading to reduction in cyber incidents and potential breaches.

ADVANTAGES AND USE CASES

The adoption of the StyxView platform can reduce incidents by providing visibility to exposures that could be exploited by bad actors and timely remediation. The Styx Intelligence platform has a simplified approach by providing visibility to external digital assets and vulnerabilities that can be exploited by bad actors for financial crime, leading to revenue loss, brand and reputational damage. Use cases supported include:

- Monitoring of look-alike domains, phishing websites and targeted phishing campaigns
- Monitoring/detection of account and profile impersonation (executives and company) on social media
- Takedown against brand impersonations, social media accounts, brand infringements and phishing websites
- Executive protection – monitoring of high-value targets for compromised credentials and protection against social engineering attacks
- Dark web monitoring – monitoring of compromised credentials, personally identifiable information (PII) data or campaigns targeting client
- Monitoring of third-party vendor risk posture

Styx Intelligence has been recognized by Gartner as a leading and innovative vendor in this market segment and has been featured in research reports. Clients include financial institutions, retail, manufacturing and government entities in Canada, U.S. and South America.

COMPANY SOLUTION

TeejLab provides application programming interface (API) management solutions to global enterprises. Organizations are building APIs and using APIs built by others to provide various digital services, but APIs pose security and legal challenges that enterprises must address. Generative AI-driven APIs are adding new business risks. TeejLab tracks these APIs at a global scale to help enterprises address these challenges. TeejLab currently has the world's largest API repository containing thousands of APIs from hundreds of industries. Using this API repository, TeejLab provides industry-leading API discovery, security and governance solutions to help enterprises in managing their API ecosystems in a secure and compliant way. TeejLab solutions are available as a SaaS on-premise/public platform in AWS, Azure, Google and other cloud environments.

ADVANTAGES AND USE CASES

Enterprises possess diverse API ecosystems, encompassing product functionalities, open-source integrations, third-party collaborations and M&A transactions, causing a significant lack of transparency. This can lead to legal risks such as nonconformity with GDPR, EU AI Law, SOC2, ISO27001 requirements and security risks such as data breaches. TeejLab's platform manages these risks via software analysis and network monitoring to discover and audit APIs automatically. Moreover, it benchmarks APIs—whether public/open or internal/external—against industry-leading standards for informed decision making. Recognized by Gartner and other independent technology and industry evaluators, TeejLab has garnered attention from global authorities on security and risk management practices like ISACA, Information Systems Security Association (ISSA), OWASP and Institute of Internal Auditors (IIA). With invitations to over 150 events worldwide, TeejLab is dedicated to educating the industry about innovative API management practices.

COMPANY SOLUTION

Trulioo is the world's identity platform, trusted by leading companies for their verification needs. Offering business and person verification across the globe, Trulioo covers 195 countries and can verify more than 13,000 ID documents and 700 million business entities while checking against more than 6,000 watchlists. The company's comprehensive suite of in-house capabilities, integrated across a single automated platform, powers customizable onboarding workflows tailored to meet any market requirement. Combining its state-of-the-art technology with expert verification knowledge across diverse markets, Trulioo enables the highest verification assurance levels, optimizing onboarding costs and fostering trust in the global digital economy. Investors such as Goldman Sachs, American Express and Santander attest to the value and potential of the Trulioo platform.

ADVANTAGES AND USE CASES

Trulioo provides capabilities that fulfill a broad range of compliance requirements, including Know Your Customer (KYC), Know Your Business (KYB) and Anti-Money Laundering (AML). Trulioo delivers unparalleled accuracy and coverage with more than 450 global and local data sources and market expertise worldwide.

Trulioo has garnered numerous awards including B.C. Technology Impact Awards and inclusion in Deloitte's Fast 50 and Fast 500 lists in 2023. Trulioo holds key credentials such as ISO 27001:2013 and SOC2 Type 2 certification. Trulioo patented technology in identity document verification is certified by iBeta to the ISO/IEC 30107-3 Level 2 standard. The company has achieved significant milestones throughout its history, including successful Series D fundraising in June 2021. Trulioo partners with global leaders including two of the top three ecommerce marketplaces, six of the top seven worldwide payments providers and four of the top five foreign exchange brokers.
